#### Introduction

EMC8432 is an ethernet communication module for RS232, while EMC8485 for RS422/RS485.

The EMC8485 has isolated differential signals for better long distance connection.

All The module has 8-bit I/O's, any I/O can be as TTL level input or enhanced drive capacity output [500mA(peak),45Vdc(max)].

The module also provide the software counter function for any TTL input up to 100Hz(5ms) counting speed.

DLL is provided for WinXP, Win7 and later or LINUX platform and sample programs come with VB source code.
